

**NEW!** Extraterrestrial series TESD "SPACE" (TESD-SP) - DC/DC "SPACE" class converters in robust metal cases with mounting flanges and **pin-side shielding**. They include additional input and output filter circuits, applying **no-optocoupler feedback**. Lack of internal empty spaces and materials, which produce gases when used in vacuum, allows to apply TESDs units at heights up to "near-space". The series preserves dimensions and pin-outs of TESND and TESD series. Minimal weight and maximal efficiency - properties making TESD "SPACE" ideally fitting for commercial and special application, in conditions of high reliability demand and resilience to external acting factors. *Serial production is planned to start in January 2021.*
